

## INTRODUCTION

### Our Background...

Green Rubber's belting and fabrication division was established in 1990 as the fresh-cut vegetable industry was just beginning to gain popularity among consumers. Our main facility is located in the heart of California's "Salad Bowl" where over the years, we've been heavily involved in supplying the needs of equipment manufacturers, and processors alike, and have focused on being innovative by providing solutions for the entire food industry. Whether you're harvesting, processing, packaging, or shipping food products (or any item for that matter), we have the products to fill your needs.

### Green Rubber, Today

As the food processing industry has matured, and the demand for safer, and better products has increased, Green Rubber has done our best to keep our products and equipment as modern and diverse as possible. From the highest quality European belt products, to the more economical domestic specifications, we have a belt to meet your every need. We have a highly knowledgeable staff, and skilled technicians who will work to ensure that you receive the right product, fabricated to your precise requirements. Our fabrication division is capable of slitting your belts to precise widths; attaching flights and cleats to your specifications for incline applications; we can attach corrugated sidewalls to provide maximum retention of raw product; perforate belts with holes for dewatering and drainage; attach mechanical fasteners, and even vulcanize belts to be endless. Our diverse inventory provides us with a multitude of options for your belting requirements, and with over 100 unique in-stock belting products to choose from, there aren't many requests we can't fill. Remember, we are truly an organization built around our knowledge of conveyor belting, and the food processing industry, so do yourself a favor, and contact our sales team the next time you need a belting product.
